

Dashboard Design

Date	27 August 2026
Team ID	-
Project Name	Food Ordering Behaviour and Consumer Trends
Maximum Marks	5 Marks

Creating an effective dashboard involves thoughtful design to ensure that the presented information is clear, relevant, and easily understandable for the intended audience.

Here are some key principles and best practices for dashboard design

Activity 1: Interactive and visually appealing dashboards

Creating interactive and visually appealing dashboards involves a combination of thoughtful design, effective use of visual elements, and the incorporation of interactive features. Here are some tips to help you design dashboards that are both visually appealing and engaging for users so take care of below points

- Clear and Intuitive Layout
- Use Appropriate Visualizations
- Colour and Theming
- Interactive Filters and Slicers
- Drill-Down Capabilities
- Responsive Design
- Custom Visuals and Icons
- Use of Infographics

Note: Highlight the major outcomes in form of bullet points

Sample:

- **The dashboard analyzes 50,000 food orders**, providing a comprehensive overview of customer ordering behaviour and consumer trends.
- **Cuisine preferences vary across different cities**, helping identify differences in customer food choices and regional ordering patterns.
- **Order distribution differs across age groups and restaurant segments**, providing insights into which customer groups are more active in different restaurant categories.
- **Customer preferences vary across different cuisines**, helping identify the cuisines that receive higher and lower order volumes.
- **Order patterns differ across companies and meal types**, providing insights into customer preferences for Breakfast, Lunch, Dinner, and Snacks across different companies.
- **Customer ratings vary across meal types**, helping evaluate customer satisfaction and identify meal categories with better customer ratings.
- **Cities show different order volumes**, allowing the identification of cities with comparatively higher and lower customer demand.
- **Premium restaurants recorded the highest average order value**, indicating higher customer spending compared with Budget and Mid-range restaurants.
- **Discount and repeat-order analysis helps understand customer behaviour**, showing how repeat and non-repeat orders are distributed based on discount availability.
- **Interactive Tableau filters such as City, Cuisine, Meal Type, and Restaurant Type** allow users to explore the data dynamically and obtain more focused insights for decision-making.

Activity 2

Publish Dashboard on Tableau Public and Paste the Dashboard Public link below:
