Project Name	Food Ordering Behaviour and Consumer Trends
Maximum Marks	5 Marks

By using stories in Tableau, you can effectively communicate complex data in a way that is both interactive and engaging, making it easier for the audience to follow along and understand the insights. It's a tool for **data storytelling**, allowing you to present insights in a cohesive, engaging way that takes viewers through a logical progression of findings or analyses.

In Tableau, **Story** is a feature that allows you to create a sequence of dashboards, visualizations, and text to present data insights in a cohesive and narrative-driven way. It's like a slideshow within Tableau that guides the audience through a series of data points, helping them understand key insights, trends, or outcomes of your analysis.

Observation:

- **Bangalore shows consistently high demand** across most cuisine categories, particularly **Chinese, Desserts, and Fast Food**.

- **Mumbai has strong demand for Desserts**, with approximately **8.14 lakh orders**, making it one of the highest city-cuisine combinations shown.
- **Pune has relatively high demand for Chinese cuisine**, at approximately **7.97 lakh orders**.
- **Fast Food is highly popular across all the cities** shown, with orders generally above **7.6 lakh**.
- **North Indian cuisine has comparatively lower demand** in several cities. For example, Chandigarh shows around **7.26 lakh orders**, which is lower than most other city-cuisine combinations.
- **Desserts show strong demand**, especially in Mumbai, while Bangalore also records high dessert orders.
- Overall, the heatmap indicates that **cuisine preference varies by city**, but the differences are relatively moderate, with most combinations falling roughly between **7.25 lakh and 8.14 lakh orders**.

Activity 2:

Activity 2: Publish Story on Tableau Public and Paste Public link
