Project Title	Food Ordering Behaviour And Consumer Trends
Maximum Marks	3 Marks

Project Proposal (Proposed Solution) template

This project proposal outlines a solution to address a specific problem. With a clear objective, defined scope, and a concise problem statement, the proposed solution details the approach, key features, and resource requirements, including hardware, software, and personnel.

Project Overview	
Objective	To analyze food-ordering data and identify customer preferences, ordering patterns, spending behaviour, and consumer trends using Tableau visualizations and dashboards.
Scope	The project covers data preparation, analysis, and visualization of food-ordering information such as City, Cuisine, Meal Type, Restaurant Type, Order Value, Delivery Time, Discounts, Ratings, and Repeat Orders. The analysis is limited to the available dataset and focuses on discovering meaningful customer and business trends.
Problem Statement	
Description	Food-ordering platforms generate large amounts of customer and order data, but it can be difficult to understand customer preferences, spending patterns, cuisine choices, and repeat-order behaviour from raw data.
Impact	Analyzing these patterns can help customers understand their preferences and help businesses identify popular cuisines, customer spending behaviour, and factors related to repeat ordering.
Proposed Solution	
Approach	Import the food-ordering dataset into Tableau, examine and prepare the data, analyze customer ordering patterns, create appropriate

	visualizations, and develop an interactive dashboard to identify consumer trends and insights.
Key Features	Cuisine preference analysis across cities, average order value by restaurant type, meal-type analysis, city-wise order analysis, delivery-time analysis, discount and repeat-order analysis, interactive filters, and dashboard-based visualization of customer trends.

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware		
Computing Resources	Computer/Laptop used for Tableau development and data analysis	Intel Core i3/i5 or equivalent processor; 4+ cores recommended
Memory	RAM required for Tableau and dataset processing	Minimum 8 GB RAM; 16 GB recommended
Storage	Storage for dataset, Tableau workbook, screenshots, and project documentation	Minimum 256 GB SSD; 10+ GB free space for project files
Software		
Frameworks	Data visualization and analytics platform	Tableau Public / Tableau Desktop Public Edition
Libraries	Not required for the primary Tableau implementation	Tableau's built-in data preparation, calculation, and visualization features
Development Environment	Tableau public	Tableau Public/Desktop Public Edition; web browser for project resources and documentation
Data		
Data	Food ordering behaviour dataset containing customer and order information	CSV format; approximately 50,000 records containing fields such as City, Cuisine, Meal Type, Restaurant Type, Order Value, Delivery Time,

		Rating, Discount Applied, Repeat Order, and other customer/order attributes
